

Response Documentation

1. Incident Response Template

Incident Information

Incident ID: INC-2026-002

Incident Name: Phishing Email Campaign

Date Detected: 29-May-2026

Reported By: SOC Analyst

Priority: High

Status: Closed

Executive Summary

A phishing email campaign targeted employees within the organization. Several users received emails containing malicious links impersonating a banking institution. The SOC team identified the threat, blocked malicious domains, and prevented credential compromise.

Incident Timeline

Date & Time Activity

09:00 AM	Suspicious email reported
09:15 AM	Alert generated in SIEM
09:30 AM	Initial investigation started
10:00 AM	Malicious URL identified
10:20 AM	Domain blocked
10:45 AM	User systems verified
11:00 AM	Incident contained
12:00 PM	Final report prepared

Impact Analysis

Affected Users

5 Employees

Affected Systems

- Email Server
- Employee Workstations

Data Exposure

No confirmed data breach.

Business Impact

Low to Medium

Remediation Actions

- Blocked malicious URL.
 - Updated email filtering rules.
 - Conducted user awareness notification.
 - Verified endpoint integrity.
-

Lessons Learned

- Improve phishing awareness training.
 - Strengthen email filtering.
 - Implement additional URL reputation checks.
-

2. Investigation Activity Log

Incident Investigation Log

Timestamp	Analyst Action	Result
09:00 AM	Received phishing alert	Investigation initiated
09:15 AM	Reviewed email headers	Suspicious sender identified
09:30 AM	Extracted URL	Malicious link discovered
09:45 AM	Checked VirusTotal	URL flagged as malicious
10:00 AM	Blocked URL	Threat contained
10:30 AM	Contacted users	No credentials submitted
11:00 AM	Closed investigation	Incident resolved

3. Phishing Investigation Checklist

Email Verification

- Verify sender address
 - Check email headers
 - Review SPF records
 - Verify DKIM signature
 - Examine reply-to address
-

Link Analysis

- Extract URLs
 - Check URL reputation
 - Scan with VirusTotal
 - Identify redirects
-

User Impact Assessment

- Identify recipients
 - Determine who clicked links
 - Check credential submissions
 - Verify endpoint status
-

Containment Actions

- Block sender domain
 - Block malicious URL
 - Notify affected users
 - Update email filters
-

Documentation

- Record timeline
- Save screenshots
- Document indicators
- Generate final report

4. Mock Post-Mortem Report

Incident Name

Phishing Email Campaign

Root Cause

The phishing attack succeeded in reaching employee inboxes due to insufficient filtering of newly registered domains.

What Went Well

- Alert detected quickly.
 - SOC team responded immediately.
 - No credentials were compromised.
 - Malicious URLs were blocked promptly.
-

What Went Wrong

- Email filtering rules were outdated.
 - Employees required additional awareness training.
 - URL inspection controls were limited.
-

Recommendations

1. Enable advanced email security controls.
 2. Conduct quarterly phishing simulations.
 3. Improve URL filtering mechanisms.
 4. Strengthen user awareness programs.
 5. Deploy threat intelligence integration.
-

Lessons Learned

Early detection and rapid response significantly reduced the impact of the phishing campaign. Continuous employee awareness training and stronger email security controls will help prevent similar incidents in the future.

5. Incident Communication Report

Internal Notification

Subject:

Security Incident Notification – Phishing Campaign Detected

Dear Team,

The SOC has identified a phishing email campaign targeting organizational users. The malicious email contained links attempting to harvest credentials.

Immediate actions taken:

- Malicious domain blocked
- User notifications issued
- Email filters updated

No confirmed data compromise has been identified.

Please remain vigilant and report suspicious emails immediately.

Regards,

SOC Team

6. Evidence Documentation Form

Evidence ID	Evidence Type	Description	Collected By	Date
EV-001	Email Header	Original phishing email	SOC Analyst	29-May-2026
EV-002	URL IOC	Malicious URL	SOC Analyst	29-May-2026
EV-003	SIEM Logs	Alert records	SOC Analyst	29-May-2026
EV-004	Endpoint Logs	User workstation logs	SOC Analyst	29-May-2026

7. Incident Closure Report

Incident Status

Closed

Resolution Summary

The phishing campaign was successfully identified, investigated, and contained. No user credentials were compromised and no malware execution was observed. All identified indicators were blocked and monitoring was increased.

Final Classification

Incident Type: Phishing

Severity: High

Impact: Low

Resolution Time: 3 Hours

Business Impact: Minimal
